SUMMARY

Frontend Engineer with 10+ years of experience building web applications, specializing in React and TypeScript. My main expertise is frontend development, while also having hands-on experience with Node.js and backend development across different projects.

I've worked on products and teams for international companies including ESPN, VAS, and Novohit, taking ownership of frontend architecture, API integration, technical decisions, and end-to-end delivery. I have experience working in remote and asynchronous environments, collaborating with both small and large, international teams.

I'm pragmatic when solving problems and value clear communication, maintainable solutions, and a strong sense of ownership. More recently, I've been incorporating AI tools, LLMs, and agent orchestration into my development workflow to increase productivity and explore new ways of building software.

SKILLS

Core: React · TypeScript · JavaScript · HTML/CSS · React Query · Vite · Node.js · REST · Git/GitHub

Also: Next.js · Vercel · Supabase · PHP · Laravel · MySQL · GraphQL · Chakra UI · Formik · Redux · React Testing Library · MSW · Figma (collab) · AI-assisted development

EXPERIENCE

Frontend Engineer, Product Solutions Lead — Novohit

Apr 2024 – Apr 2026

- Owned the frontend end to end as the sole developer of the stack: architecture, UI/UX, API integration, and delivery of several business apps (React, TypeScript, Vite)
- Built production UIs with REST/GraphQL, complex forms, and data-heavy workflows (Chakra UI, React Query, Formik)
- Integrated internal analysis tools using LLMs (Grok API) to cross internal and external data
- Created UI designs and feature documentation in Figma

React Developer — Making Sense

Jun 2019 – Mar 2024

Hired by Making Sense (software consultancy). Selected client work:

Vetsource — Script Approval

- Built a React platform from the ground up: structure, API integration, reviews, and onboarding teammates

Vetsource — Pricing Tools Jan 2022 – Apr 2022

- Feature work with attention to performance and test parallelization on a complex pricing UI

VAS / Valley Agricultural Software Jun 2019 – Jan 2022

- Modernized legacy UI toward hooks and TypeScript; used React Query where global Redux was overkill
- Testing with React Testing Library + MSW; collaborated with AR/US teams (SCRUM/JIRA, GitHub reviews)

React Native Developer — Phinx

Mar 2019 – Jun 2019

- Mobile social app for a Brazil-based client

Web UI Developer — Globant

Mar 2017 – Apr 2018

- **Disney / ESPN** — internal Bottomline app: React, Redux, unit tests, agile delivery, cross-team work with the client

Freelance Web Developer

Sep 2015 – Mar 2017

- Variety of web projects (some full stack); foundation for later React product work

SELECTED WORK

Three personal live demos, if you want to see product. Not client production systems.

The Map World Game 2026 — geography game; Vercel, Convex. Server-side AI trivia: no repeat questions for the same user, and generated ones are stored and reused across players so new ones are created only when needed. 540+ tests.

Face-Hand-Track — in-browser face & hand recognition, no backend (React, TypeScript, MediaPipe / face-api). Shows how little it takes to add camera and vision models to a small web app, with guided multi-step UX.

Reservation Manager — hospitality/events reservation UI: several flows (list, detail, forms, i18n) working as one system. · [repo](#)

EDUCATION & COURSES

Artificial Intelligence — Grupo Educativo IFES (2023)

Full Stack Web Developer — Digital House (2016) · related: Acamica, Educación IT, HarvardX/MITx CS intros (2015–2017)

LANGUAGES

Spanish (native) · English intermediate (B1): comfortable reading and writing in technical contexts; actively improving
